OBJECTIVE

Frontend Developer with 2+ years of experience building scalable web applications using React, Next.js, and TypeScript. Experienced in developing responsive UI, optimizing performance, and integrating REST APIs and Web3 features. Passionate about building clean, maintainable frontend architectures and delivering high-quality user experiences.

SKILLS

Frontend:	React.js, TypeScript, Javascipt, Nextjs, HTML, CSS
State Management & Data Fetching:	Zustand, Tanstack Query, REST API
UI & Styling:	TailwindCSS, Radix, Antd
Tools:	Git, GitHub, Postman, Docker
Forms & Validation:	React Hook Form, Zod
Backend:	NodeJS, ExpressJS NestJS
Others:	Web3(EVM, TON)

WORK EXPERIENCE

02/2024 - 05/2024

Icetea Labs
Intern Frontend

- Clone UI Unsplash web using Next.js + TailwindCSS
- Participated in a Next.js project to fix UI bugs.

05/2024 - Present

Icetea Labs | Hanoi
Fresher/Junior Frontend
Tech stack: React.js, TypeScript, TailwindCSS, TanStack React Query, Zustand, REST API, Web3

- Developed and maintained modern frontend applications using React.js, focusing on responsive and user-friendly interfaces.
- Collaborated with designers, backend developers, and product teams to deliver high-quality web features.
- Integrated RESTful APIs and Web3/blockchain functionalities into frontend applications.
- Identified and resolved UI/UX issues while improving performance and responsiveness across projects.
- Contributed to building scalable UI components and maintaining clean, reusable codebases.

Selected Projects
TonKombat – Telegram Mini Game (Active project)
React-based Telegram mini app serving 30+ users

- Joined mid-development to expand gameplay features for a React-based web game serving tens of thousands of active users.

- Built reusable UI components and managed client-side data fetching and caching using TanStack React Query, while using Zustand for global UI state management.
- Implemented gameplay logic including combat mechanics, dungeon and arena systems.
- Developed character equipment system allowing users to equip items and customize character appearance.
- Built UI animations and visual effects for equipment and gameplay interactions.
- Optimized rendering performance and state updates for smoother gameplay experience.
- Accessible directly via Telegram: https://t.me/Ton_kombat_bot/app

Konsen – Telegram Mini App

- Developed a responsive Telegram mini app using React.js and TailwindCSS.
- Implemented a card swipe interaction (left/right) inspired by Tinder-style UX for feature navigation.
- Contributed to UI/UX design decisions due to the absence of a dedicated design team.
- Built reusable UI components and managed client-side data fetching and caching using TanStack React Query, while using Zustand for global UI state management.

Tonsend – Web3 Platform (tonsend.io)

- Developed a Web3 frontend integrating TON blockchain functionalities.
- Implemented form handling and validation using React Hook Form and Zod.
- Supported token creation, transfers, airdrop distribution (Merkle tree), and vesting schedule features.
- Ensured responsive UI, seamless blockchain interaction, and maintainable frontend architecture.
- Contributed to UI/UX design decisions due to the absence of a dedicated design team.

06/2023 - 08/2023

MISA Company

INTERN FRONTEND

Build UI and functions as required

- FE: Html, Css, Js
- BE: ASP.Net Core
- DB: MariaDb

PROJECTS

2025 -

Exam Management System (Multi-role Platform)

Frontend Developer

Tech Stack: Next.js, TypeScript, TanStack Query, REST API

Project Overview:

Developed frontend features for a role-based exam management system with User, Admin, and Super Admin roles, supporting authentication, authorization, and dynamic UI rendering based on user permissions.

Key Responsibilities:

Authentication & Authorization:

- Implemented login functionality with API integration
- Managed authentication state and protected routes
- Built role-based access control to restrict and display features based on user roles
- Dynamically rendered UI and navigation according to user permissions

Admin Features:

- Built user management interfaces (view and update user data)
- Developed exam creation and management workflows
- Implemented candidate tracking and participation views
- Built dashboards for statistics and score reporting

Super Admin Features:

- Developed interfaces for managing company admins
- Built features for creating and managing exam content
- Implemented role and permission management UI

Additional Contributions:

- Integrated REST APIs using TanStack Query for data fetching, caching, and synchronization
- Handled loading and error states to improve user experience
- Structured reusable components and scalable frontend architecture

2026 -

Room Rental Platform (Practice Project)

Fullstack Developer

Tech Stack: Next.js, React.js, PostgreSQL, REST API

Project Overview:

Built a simple room rental platform connecting users who want to rent rooms with landlords, focusing on backend development and API design using NestJS.

Links:

- GitHub (Frontend): https://github.com/quyennt201/fe-connect-room
- GitHub (Backend): https://github.com/quyennt201/be-connect-room

Key Responsibilities:

Backend:

- Designed and developed RESTful APIs using NestJS
- Implemented authentication and role-based access (Admin, User)
- Designed database schema and managed data with PostgreSQL
- Built CRUD APIs for managing rental posts

Admin Features:

- Managed and moderated rental posts

User Features:

- Viewed rental listings with filtering options
- Browsed and searched available rooms

Frontend:

- Built simple UI for listing, filtering, and viewing rental posts
- Integrated APIs for data fetching and display

EDUCATION

09/2019 - 05/2024

Engineer's Degree in Information Technology

Posts and Telecommunications Institute of Technology (PTIT)

Graduated: May 2024

CERTIFICATIONS

2023 TOEIC English
